

260 t

Bollard pull used on two AHTS vessels for heading control

Brazil Turret Remediation

Expanding from a standard time charter providing marine services, Maersk Supply Service provided on- and offshore management of remediation operations for an FSO turret mooring system in Brazil. Our solution – including three vessels and four mooring masters performing heading control, WROV monitoring and surveys – returned the FSO to full functionality without requiring removal and reinstallation.

KEY FACTS

Location:	Campos Basin
Vessels:	3
Duration:	2017 – 2018

OPERATIONS

Min heading control:	+ / - 10°
Max heading control:	+ / - 1°

Scope

Operations management and marine services

Marine Expertise

100+ years experience across 4 mooring masters

Right Solution

Completed repair without jeopardising production
