

Mafumeira Sul: Sharing knowledge for project excellence

Careful project planning, detailed risk management and strong partnership minimises downtime when the unexpected occurs

Maersk Supply Service has assisted Daewoo Shipbuilding and Marine Engineering (DSME) at Chevron's Mafumeira Sul project, offshore Angola, since 2015.

After initially assisting with anchor-handling operations, the work scope unexpectedly expanded to include servicing four accommodation barges for approximately 1 100 crew. The work called for close cooperation between the parties and a clear understanding of client needs.

Why Maersk Supply Service?

- In a relatively short time, a strong partnership was developed, not just because of the success of the work performed, but also because of the regular meetings ensuring goals and work procedures were aligned. This included a detailed tour of the site by Maersk Supply Service crew, hosted by DSME.

The customer advantage

- Maersk Supply Service's work scope involved project planning and risk management, with a great focus on safety in all aspects of operations.
