

## Peregrino: Local knowledge makes the difference

## Strong local presence in Brazil enables successful, on-time launch of FPSO

Maersk FPSO's contracted Maersk Supply Service for the final hook-up of a Statoil FPSO at the Peregrino project off the coast of Brazil.

The client was looking for a reliable, trustworthy partner with a highly capable vessel and expert crew. A Maersk Supply Service A-type vessel was mobilised in the North Sea, equipped with a crane and ROVs, and sailed to Brazil.

The ability to deal with import formalities was crucial, particularly in light of the difficulties faced by the client responsible for moorings installation.

### Why Maersk Supply Service?

- A key reason behind the choice of Maersk Supply Service was its local presence in Brazil and its intimate knowledge of Brazilian authorities and organisations. Another success factor was the ability to provide a highly experienced, specialized ROV crew subcontracted from Oceaneering who could achieve the quality demanded.

### The customer advantage

- The vessel was brought into the country with no delay and in accordance with all necessary import formalities. The ROV and crew were already onboard and ready for the job.
