

Supplying the world with the energy it needs demands efficiency from start to finish. We believe responsibly handling end-of-life assets is more than a duty, it's an opportunity.

As the dedicated decommissioning partner for the offshore energy industry, Maersk Decom constantly rethinks decommissioning to maximise value and sustainability.

Together with our partners, we focus on innovation to help energy companies restore the seabed, extend the lifetime of materials, reduce risk and free up value. Our goal is to ensure no resources – be it people, time or assets – go to waste.

20+
Decommissioning experts

40+
Versatile offshore support vessels

20+
Modern and advanced rigs

SAFETY

Acting with constant care is embedded in the safety culture of Maersk Decom, and our values guide us towards a safe, compliant and healthy work environment, offshore as well as onshore.

Working together in integrated project teams

Innovative recovery methods to reduce time

Targeting waste minimisation, re-use and closed loop recycling

Optimising plug and abandonment activities

Maximising efficiency in infrastructure removal

Constantly rethinking decommissioning to maximise value and sustainability

INTEGRATED PROJECT MANAGEMENT

Maersk Decom ensures no resources go to waste by delivering tendering, contracting and decommissioning services under one umbrella. We form an integrated team of project management and subject matter experts to execute work in accordance with best practices, often including team members from our customers and partners.

BASELINE SURVEYS, ENGINEERING & PLANNING

We call on our specialised experts and past experience to prepare innovative decommissioning plans, and carry out environmental impact assessments, concept maturation and general engineering, baseline surveys and consult with regulators.

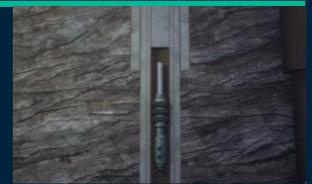

FLUSHING, CLEANING & DISCONNECTION

Our scalable decommissioning solutions include flushing and cleaning, as well as disconnection services.

PLUG & ABANDONMENT ACTIVITIES

With an in-house well engineering team and fleet of rigs and offshore support vessels, we supply the full asset spread required for plugging and abandoning wells, including special tools and services, rig moves and logistics services.

BRIDGES, TOPSIDES & SUB-STRUCTURE REMOVAL

Maersk Decom prepares assets for safe removal, including disconnection and preparation for lifting. Utilising our industry partnerships, we offer platform removal operations under the same umbrella as our full-scope solutions.

SUBSEA FACILITIES & INFRASTRUCTURE REMOVAL

With access to our in-house rigs, offshore construction and anchor handling tug supply vessels, separate elements of the value chain can be engaged at the same time, creating a flexible window to begin removal when most cost effective. We utilise a patented method for removal of flexible flowlines, and industry partnerships for diving services.

FINAL SURVEY & REMEDIAL ACTIVITIES

As part of the final stage of offshore execution of decommissioning, we provide various survey activities which ensure work scopes have been completed as planned and that the site is left with a clear seabed.

RECYCLING & WASTE MANAGEMENT

We provide tailored, transparent solutions to meet our customers' duty of care needs. Our solutions include waste mapping, preparation of inventory, decontamination and removal of marine growth, dismantling, recycling, waste management and close-out reporting.
